

Fullshape fitting of the angular correlation function of galaxies from the Dark Energy Survey Y1 data

David Sánchez Cid / davsan06@ucm.es

September 2019

VII Meeting on Fundamental Cosmology

Outline. From BAO to model constrains

- > What are **baryon acoustic oscillations** ?
- > Statistical tools:
 - ACFs, fullshape fitting and
 - Application to **DES sample**
- > **Testing the method:** lognormal mocks
- > **Some results.** Constraining parameters for DESY1 data.

Blanco telescope and star trails (Reidar Hahn, Fermilab)

Baryon Acoustic Oscillations (BAO)

> BAO as a **standard ruler**

Baryon Acoustic Oscillations (BAO)

> BAO as a **standard ruler**

Wayne Hu webpage <http://background.uchicago.edu/~whu/power/bao.html>

Baryon Acoustic Oscillations (BAO)

- > BAO as a **standard ruler**
- > Once this process ended, acoustic waves froze leaving a **signal in the distribution of galaxies**

Baryon Acoustic Oscillations (BAO)

- > BAO as a **standard ruler**
- > Once this process ended, acoustic waves froze leaving a **signal in the distribution of galaxies**
- > Suitable way of **constraining** the value of cosmological parameters.

Angular Correlation Function (ACF)

> The analysis is applied to the **Dark Energy Survey Y1** data

> The a

DES Collaboration arxiv.org/abs/1712.06209

Angular Correlation Function (ACF)

- > The analysis is applied to the **Dark Energy Survey Y1** data
- > **Definition**

$$\delta P(\theta) = n^2 [1 + \omega(\theta)] \delta\Omega_1 \delta\Omega_2$$

Angular Correlation Function (ACF)

- > The analysis is applied to the **Dark Energy Survey Y1** data
- > **Definition**
- > We apply the fullshape ACF fitting approach.

Angular Correlation Function (ACF)

- > The analysis is applied to the **Dark Energy Survey Y1** data
- > **Definition**
- > We apply the fullshape ACF fitting approach
- > It has been applied for SDSS DR8 ([arxiv.org/1308.0630](https://arxiv.org/abs/1308.0630)) Apply for the first time to DES by *Aurelio Carnero* and *Fernando de Simoni*. Assumptions

Angular Correlation Function (ACF)

- > The analysis is applied to the **Dark Energy Survey Y1** data
- > **Definition**
- > We apply the fullshape ACF fitting approach
- > It has been applied for SDSS DR8 ([arxiv.org/1308.0630](https://arxiv.org/abs/1308.0630)) Apply for the first time to DES by *Aurelio Carnero* and *Fernando de Simoni*. Assumptions

Angular Correlation Function (ACF)

- > The analysis is applied to the **Dark Energy Survey Y1** data
- > **Definition**
- > We apply the fullshape ACF fitting approach.
- > It has been applied for SDSS DR8 (ref). Apply for the first time to DES by *Aurelio Carnero* and *Fernando de Simoni*. Assumptions

1. Distance between galaxies is smaller than curvature scale
2. Negligible galaxy clustering evolution with redshift

***We keep our analysis on linear regime (on-going work: include RPT)**

ACF - Equations

$$\omega(\theta) = \int_0^\infty dz_1 \phi(z_1) \int_0^\infty dz_2 \phi(z_2) \xi^{(s)}(z_1, z_2, \theta)$$

ACF - Equations

$$\omega(\theta) = \int_0^\infty dz_1 \phi(z_1) \int_0^\infty dz_2 \phi(z_2) \xi^{(s)}(z_1, z_2, \theta)$$

> Expression with this assumptions by *T. Matsubara* (2004) [arXiv:astro-ph/0408349](https://arxiv.org/abs/astro-ph/0408349)

Testing the method: lognormal mocks

- > **What is a mock catalogue and why it is useful**

About lognormal mocks. *Coles & Jones (1991)* [10.1093/mnras/248.1.1](https://doi.org/10.1093/mnras/248.1.1), *S. Avila et al (2018)* [arXiv:1712.06232](https://arxiv.org/abs/1712.06232)

Testing the method: lognormal mock

- > **What is a mock catalogue and why it is useful**
- > **Properties of lognormal distribution and physical motivation**

$$pdf(x) = \frac{1}{\sqrt{2\pi\sigma^2}} \exp\left(-\frac{(\log x - \mu)^2}{2\sigma^2}\right) \frac{dx}{x}$$

About lognormal mocks. Coles & Jones (1991) [10.1093/mnras/248.1.1](https://doi.org/10.1093/mnras/248.1.1), S. Avila et al (2018) [arXiv:1712.06232](https://arxiv.org/abs/1712.06232)

Testing the method: lognormal mock

- > **What is** a mock catalogue and **why** it is useful
- > **Properties** of lognormal distribution and **physical motivation**
- > DESY1 data matter density field **DO** fit to a lognormal distribution

About lognormal mocks. Coles & Jones (1991) [10.1093/mnras/248.1.1](https://doi.org/10.1093/mnras/248.1.1), S. Avila et al (2018) [arXiv:1712.06232](https://arxiv.org/abs/1712.06232)

- > DESY1 data matter density field **DO** fit to a lognormal distribution
- > We generate a thousand mocks of a **fiducial cosmology** (Planck results) and a thousand of a **modified cosmology**
- > **Sensitive parameters** to BAO tracer were chosen

About lognormal mocks. Coles & Jones (1991) [10.1093/mnras/248.1.1](https://doi.org/10.1093/mnras/248.1.1), S. Avila et al (2018) [arXiv:1712.06232](https://arxiv.org/abs/1712.06232)

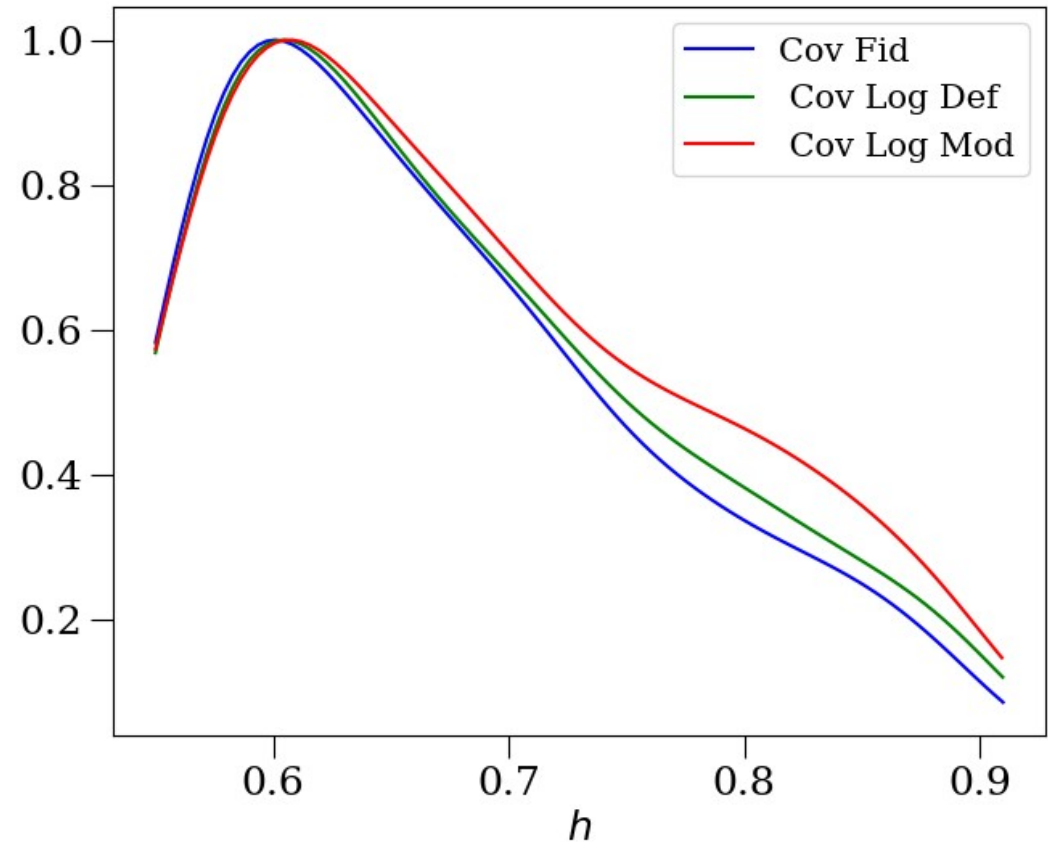

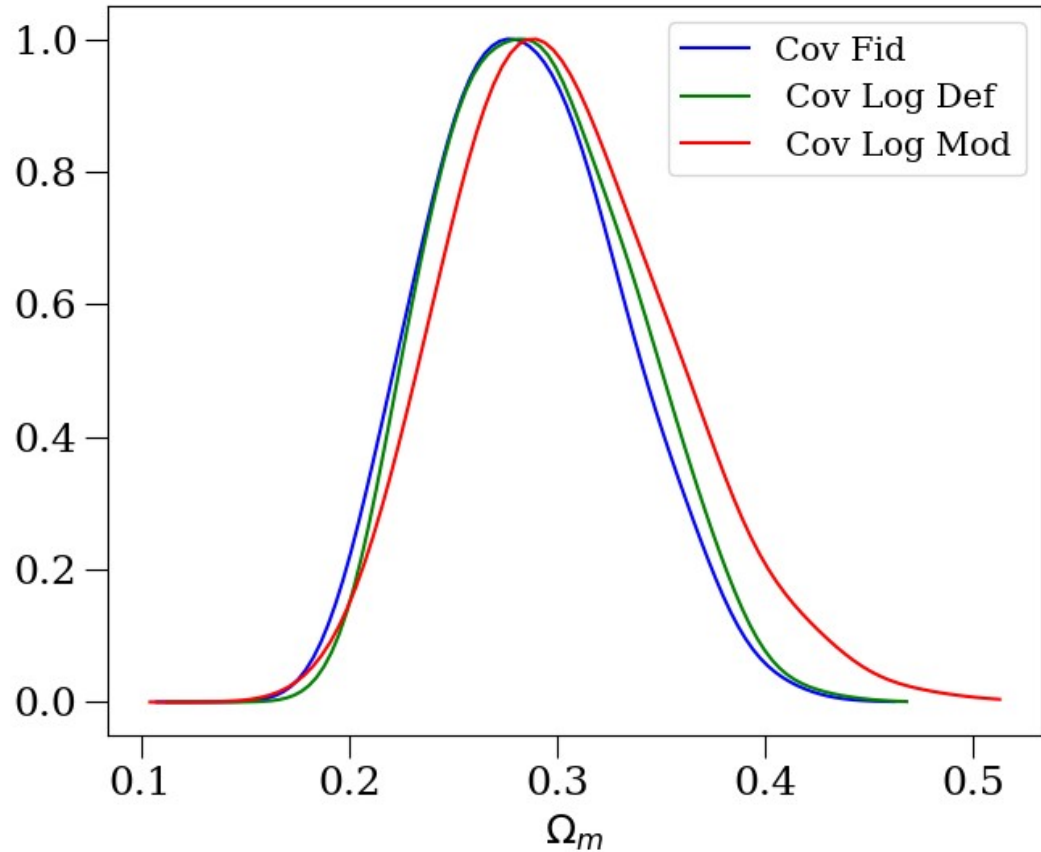

Testing the method: lognormal mocks

Model	Parameter	General meaning	Needed for ...
Flat Λ CDM	Ω_m	Matter density fraction	Background evolution
	H_0	Expansion rate	Background evolution
	Ω_b	Baryon density fraction	Thermal history
	A_s, σ_8	Variance of cosmic density structure	Structure formation
	n_s	Structure scale-dependence power law	Structure formation
Λ CDM	Ω_k	Curvature abundance	Background evolution
ν CDM	Ω_ν	Neutrino density fraction	Small-scale structure
	Massive(ν)	Number of massive neutrinos	Small-scale structure
	Massless(ν)	Number of massless neutrinos	Small-scale structure
wCDM	w	Dark energy constant equation of state	Background evolution
Extended DE	w_a, w_p, \dots	Dark energy varying equation of state	Background evolution

About lognormal mocks. Coles & Jones (1991) [10.1093/mnras/248.1.1](https://doi.org/10.1093/mnras/248.1.1), S. Avila et al (2018) [arXiv:1712.06232](https://arxiv.org/abs/1712.06232)

Some results using lognormal mocks

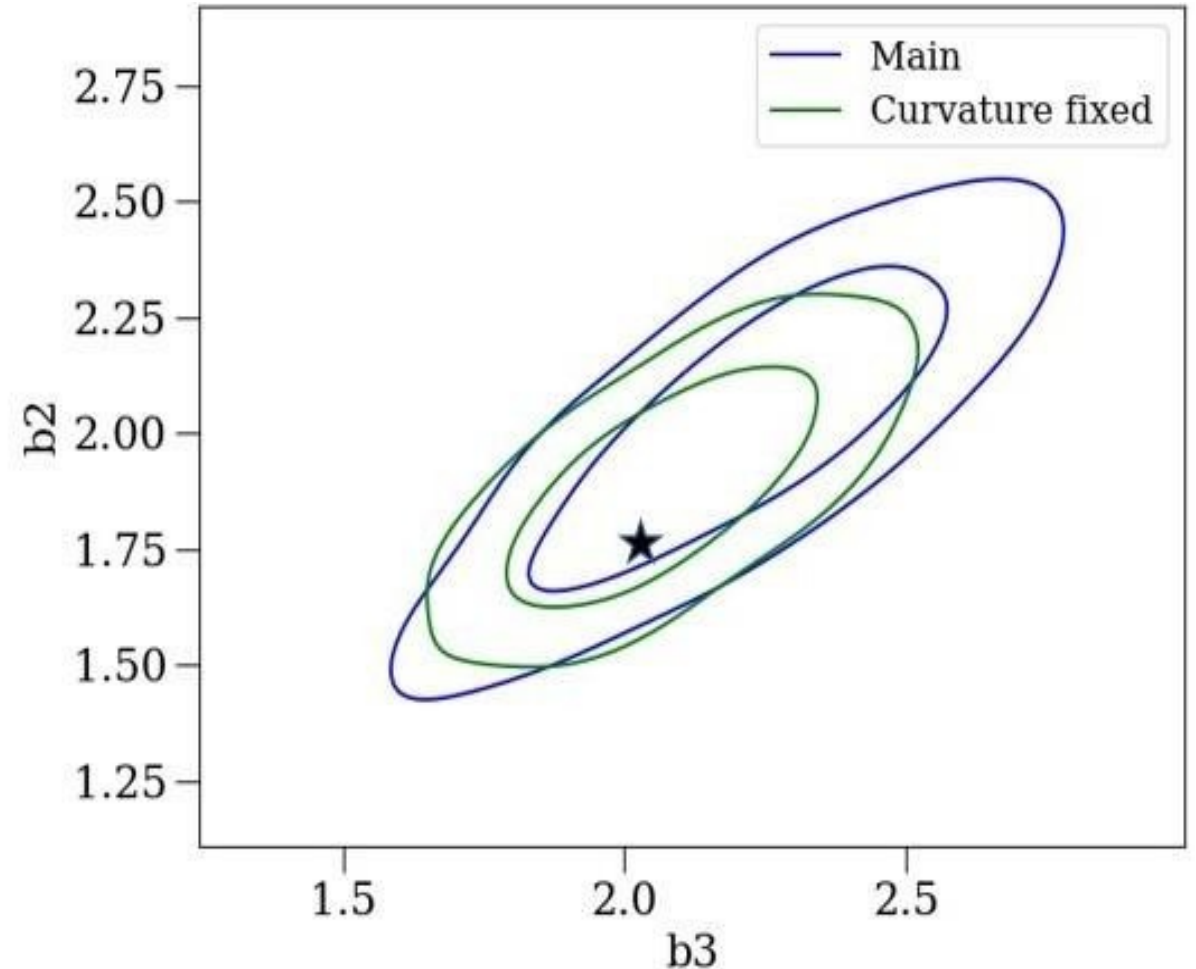

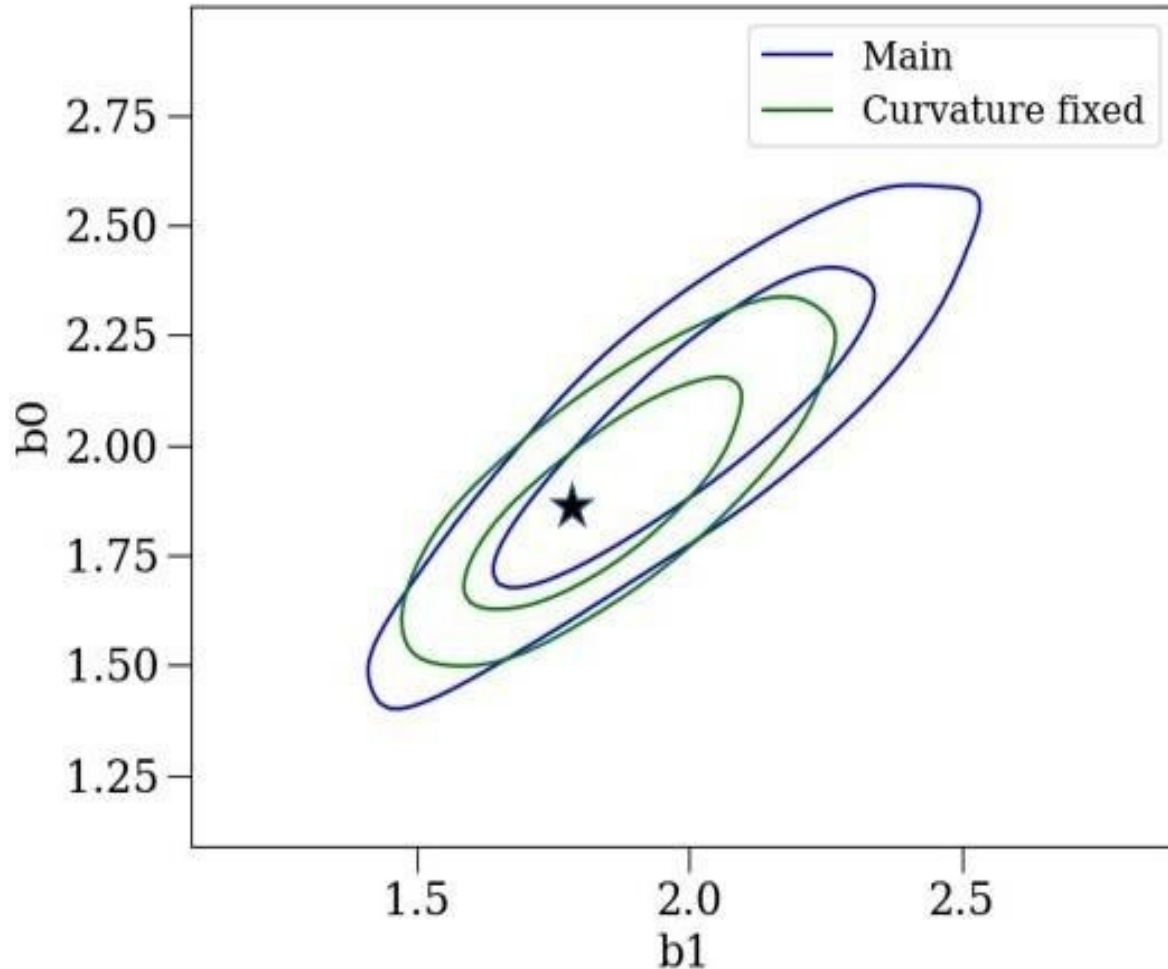

Negligible effect of underlying cosmology in covariance. Kodwani et al. (2018) [arXiv:1811.11584](https://arxiv.org/abs/1811.11584)

Some results DESY1 data: bias fixing

Some results DESY1: curvature fixing

Fullshape fitting of the ACF of galaxies from DES Y1
